

Dr. Andrea Dutton
Assistant Professor
Department of Geological
Sciences
College of Liberal Arts and
Sciences

Dr Dutton received her B.A. from Amherst College and an M.S. and Ph.D. from the University of Michigan in Geology. She then held positions as a Postdoctoral Fellow and Research Fellow at The Australian National University. Dr. Dutton is a carbonate geochemist, who studies Earth's past climate and sea level changes. Dr. Dutton's main research focus at present is to establish the behavior of sea level and polar ice sheets during past warm periods to better inform us about future sea-level rise. She travels to field sites around the globe to collect data on the rates, magnitude, and timing of past sea level and climate changes.

Global Research Interests

- I have conducted field work at many sites around the globe and am currently interested in developing a proposal to drill in the Seychelles bank using a research ship.

Countries of Focus

- Seychelles
- Bahamas
- Mexico
- Jamaica
- U.S.
- Australia (interested in)

Mentor: Ellen Martin

- Professor
- Department of Geological Sciences, College of Liberal Arts and Sciences
- Center for African Studies
